

Welcome to quarkus-pha

This is a sample text document used by the **document-editor** showcase. It is served via the WOPI host endpoint and rendered inside Collabora Online (LibreOffice in the browser).

What you can do

- Edit text and formatting from the browser
- Use the toolbar to save, print, download, and go fullscreen
- Multiple users can edit the same document collaboratively

About the stack

The browser embeds the editor via an `iframe`, and communicates with the server using the *WOPI protocol* and `PostMessage` API. Quarkus serves the document bytes; Collabora Online runs the actual office engine.
